Using PV Power efficiently ft. Deep learning & Big Data

Filip Ilic filip.ilic@tugraz.at
Stefan Ainetter stefan.ainetter@tugraz.at

What can we offer?

- Prediction of power consumption
- Prediction of power generation based on data analysis & Machine Learning techniques
- Time-series Prediction
  - E.g. Recurrent Neural Networks, Long-Short-Term-Memory, etc.
  - Statistical Concepts such as Kalman Filtering, Data-preprocessing, Outlier Detection
- Used method depends highly on the available data

Our Mockup from the GreenTechJam:
